

#503(prac7)---24/08/19---

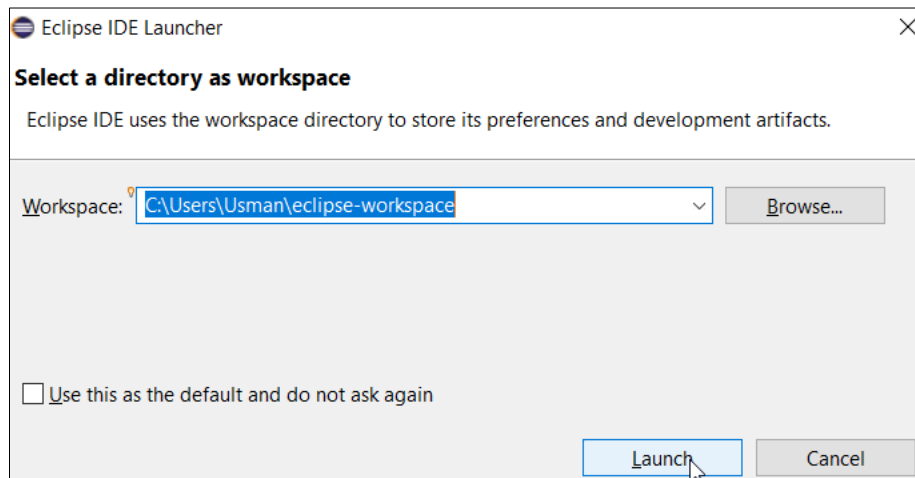

#AIM: Write and test a program for logging in facebook webpage.

**PRE-REQUISITES:**

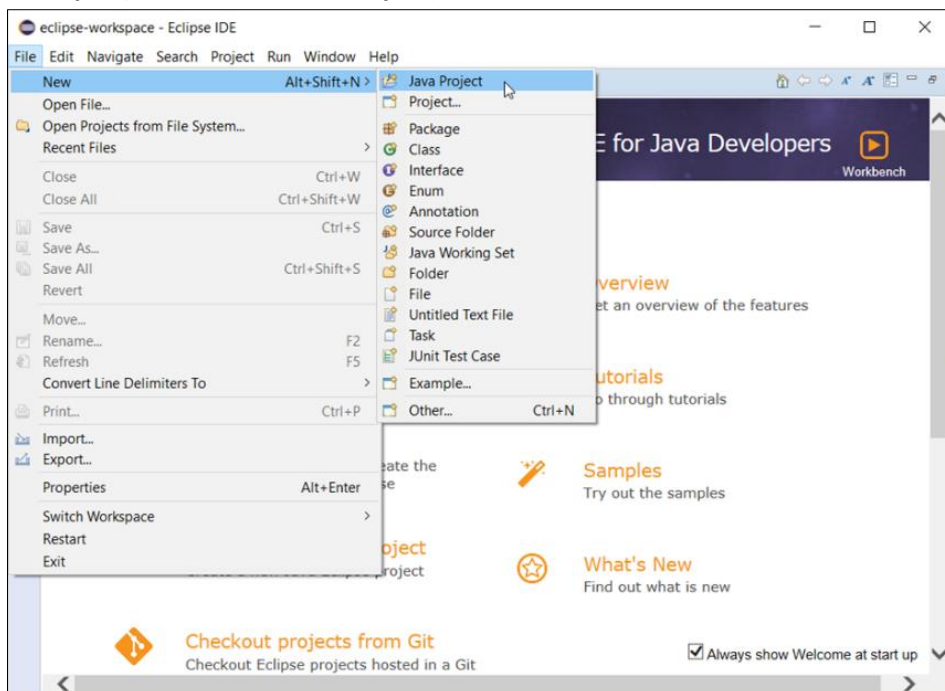

- 1) Check that you have **JDK**.
- 2) Check that you have **Eclipse IDE**.
- 3) Check that you have **Selenium Server Driver and Client Driver(JAR files)**.
- 4) Check that you have **Gecko Driver**.
- 5) Check that you have a stable Internet connection.

**STEPS:**

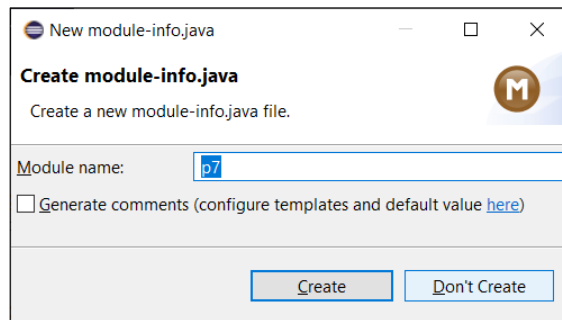

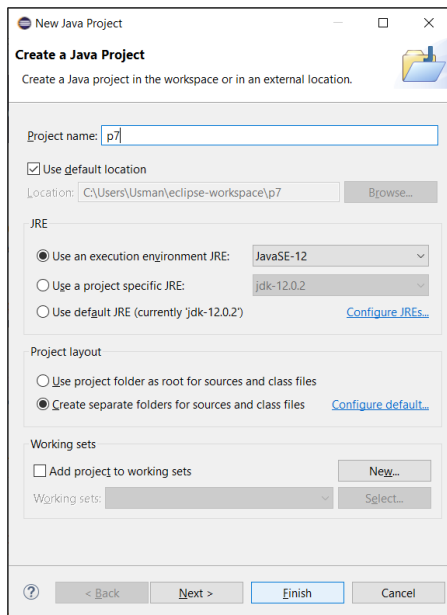

- 1) **Open Eclipse.** Select your workspace directory. Click **Launch**:

- 2) **Create a Project(File > New > Java Project):**

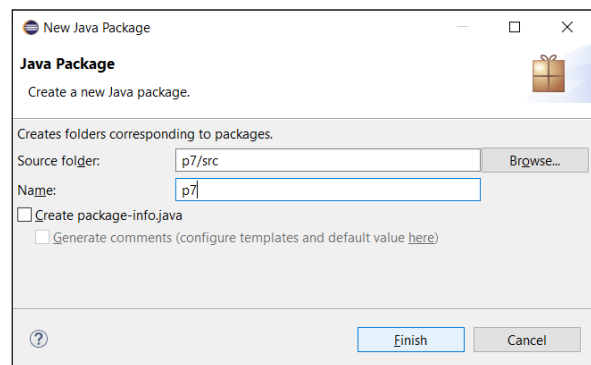

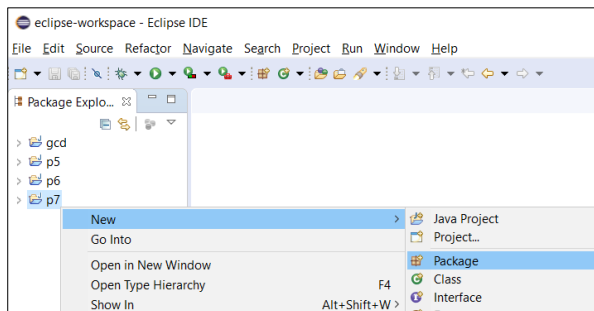

**3) Name the project as “p7” > click Finish > click Don’t Create module:**

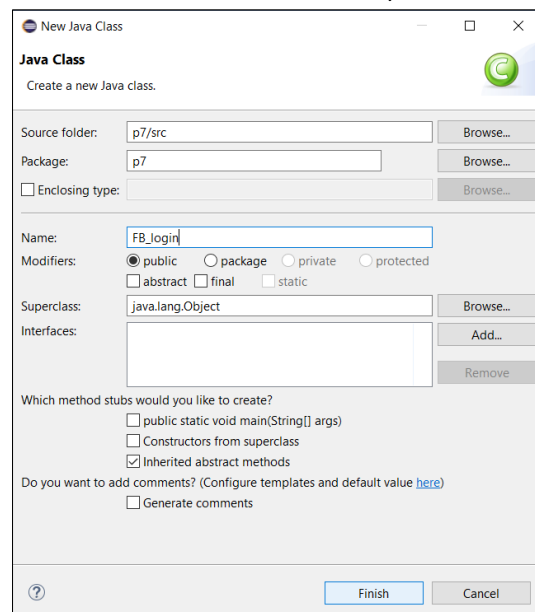

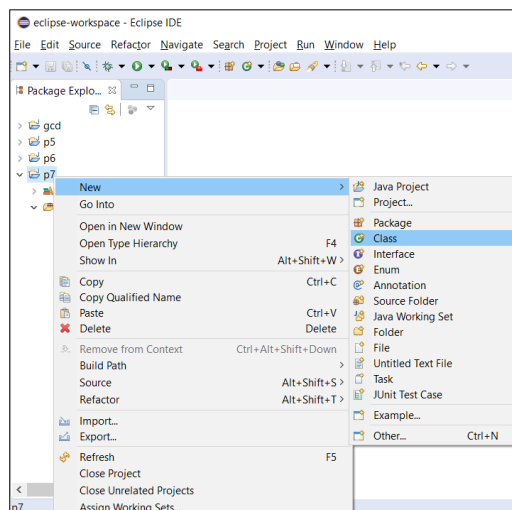

**4) Close the “Welcome” tab.**

**5) Create a Package(right-click on Project Name > New > Package > Name it > Finish):**

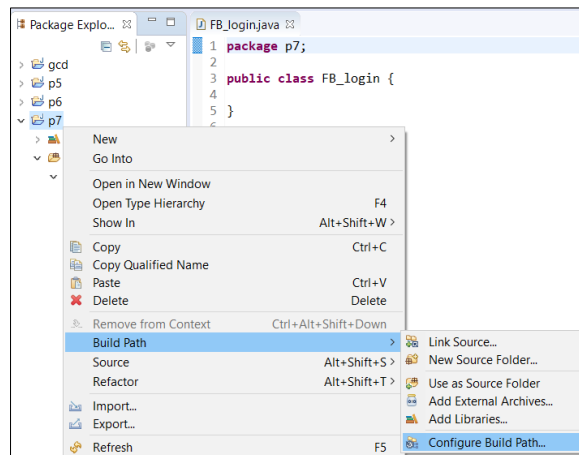

**6) Create a Class(right-click on Project Name > New > Class > Name it > Finish):**

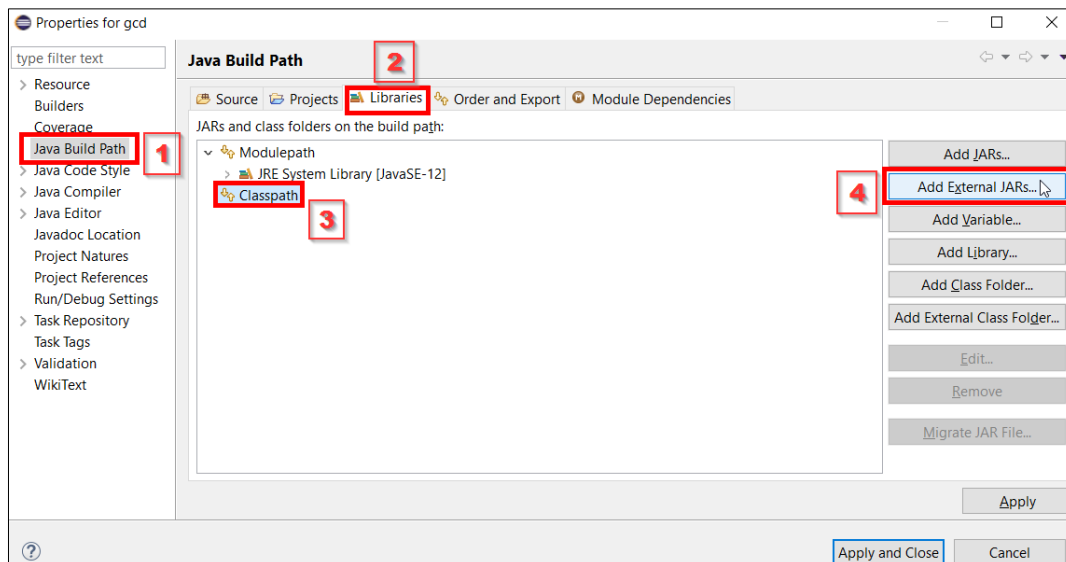

## 7) Adding “Selenium Server Driver and Client Driver(JAR files)” in Eclipse IDE:

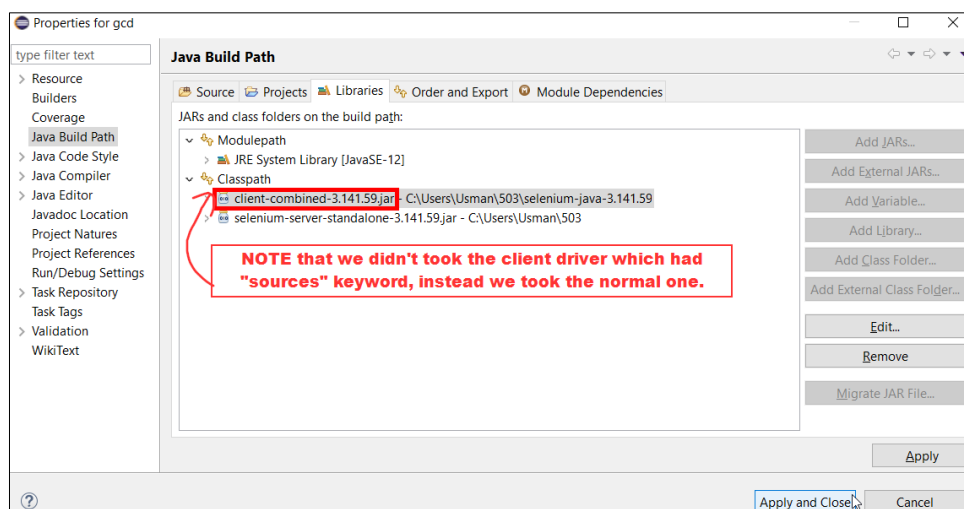

- right-click on Project Name > Build Path > Configure Build Path...

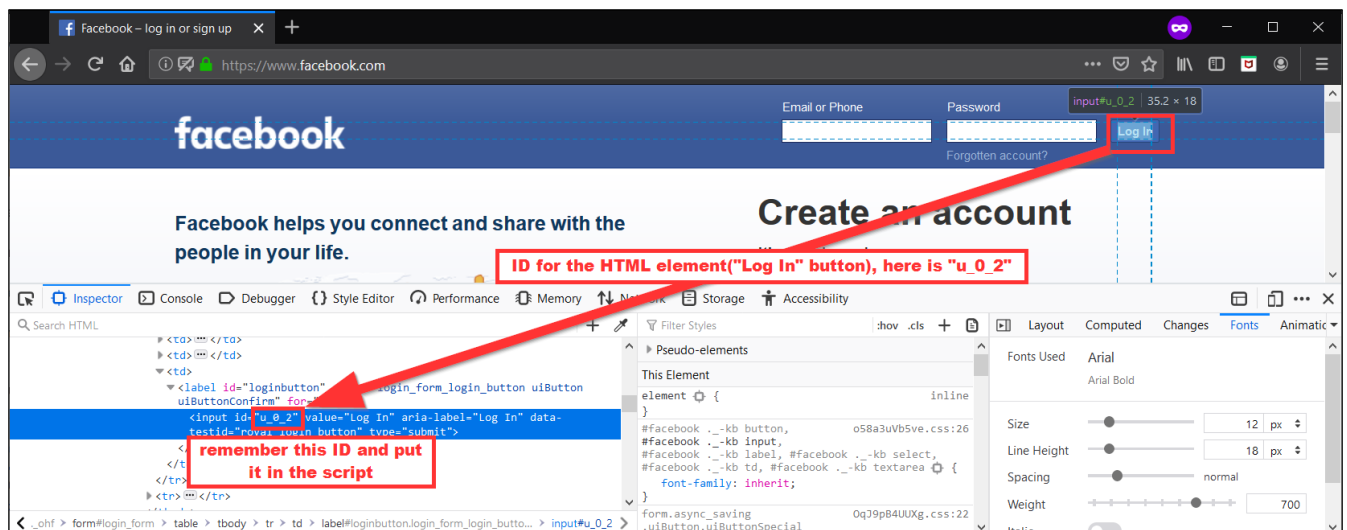

- now go under: Java Build Path > Libraries > Classpath > click Add External JARs...

- Browse and add JAR files > click Apply and Close :

- 8) Fetching ID's of the HTML attributes of the elements from the facebook webpage.  
For instance we looking for the ID behind "Log In" button HTML element  
(right-click over element(button/textbox) > click **Inspect Element**):  
(do the same for EMAIL TEXTBOX & PASSWORD TEXTBOX)

- 9) Creating the **script** in **JAVA**:  
(NOTE that this **script** will be run by Eclipse IDE)  
(In simple words, it's like we are  
-ordering Eclipse to run a script or to do a job  
-of opening the browser, visiting the URL  
-and putting credentials in textboxes and clicking button with the help of Selenium Drivers  
-and to show the result.  
-Hence automating the work in browser for logging in)
- Now we'll put the path of "geckodriver" in a String **driverPath**
  - And in here, we'll put the ID's in the **.id()** method respectively.

---(FB\_login.java)---

package p7;

```
import org.openqa.selenium.By;
import org.openqa.selenium.Keys;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.WebElement;
import org.openqa.selenium.firefox.FirefoxDriver;
import org.openqa.selenium.firefox.*;
import org.openqa.selenium.firefox.FirefoxOptions;
import org.openqa.selenium.firefox.FirefoxProfile;
import org.openqa.selenium.firefox.internal.ProfilesIni;
```

```
public class FB_login {
    static String driverPath = "C:\\Users\\Usman\\503\\geckodriver.exe";

    public static void main(String[] args) {
        System.setProperty("webdriver.gecko.driver", driverPath);
        //DesiredCapabilities capabilities = DesiredCapabilities.firefox();
        //capabilities.setCapability("marionette",true);
        ProfilesIni allProfiles = new ProfilesIni();
        FirefoxProfile fp = new FirefoxProfile();
```

```

        fp.setPreference(FirefoxProfile.PORT_PREFERENCE,"7055");
        FirefoxOptions options = new FirefoxOptions();
        options.setProfile(fp);

        //objects and variables instantiation
        WebDriver driver = new FirefoxDriver(options);
        String appUrl = "https://www.facebook.com/";

        //launch the firefox browser and open the application url
        driver.get(appUrl);

        //maximize the browser window
        driver.manage().window().maximize();

        //declare and initialize the variable to store the expected title of the
webpage.
        String expectedTitle = "Facebook - log in or sign up";

        //fetch the title of the web page and save it into a string variable
        String actualTitle = driver.getTitle();

        //compare the expected title of the page with the actual title of the page
        and print the result
        if (expectedTitle.equals(actualTitle)) {
            System.out.println("Verification Successful - The correct title is
displayed on the web page.");
        }
        else {
            System.out.println("Verification Failed - An incorrect title is
displayed on the web page.");
        }

        //enter a valid username in the email textbox
        WebElement username = driver.findElement(By.id("email"));
        username.clear();
        username.sendKeys("your email id");

        //enter a valid password in the password textbox
        WebElement password = driver.findElement(By.id("pass"));
        password.clear();
        password.sendKeys("your password");

        password.sendKeys(Keys.ENTER);

        //click on the Sign in button
        WebElement LogInButton = driver.findElement(By.id("u_0_2"));
        LogInButton.click();

        //close the web browser
        driver.close();
        System.out.println("Test script executed successfully.");

        //terminate the program
        System.exit(0);
    }
}

```

## 10) Run the file from Eclipse IDE:

- **OUTPUT:**

## 11) Finish!
